

# GROOVED COUPLINGS AND FITTINGS

we are a leading  
invisible grooved  
couplings  
and fittings  
Supplier in India.

OFFERED BY  
'SKS VALVES'

**SKS**

# COMPANY PROFILE

CNG Grooved products are very good quality piping products.

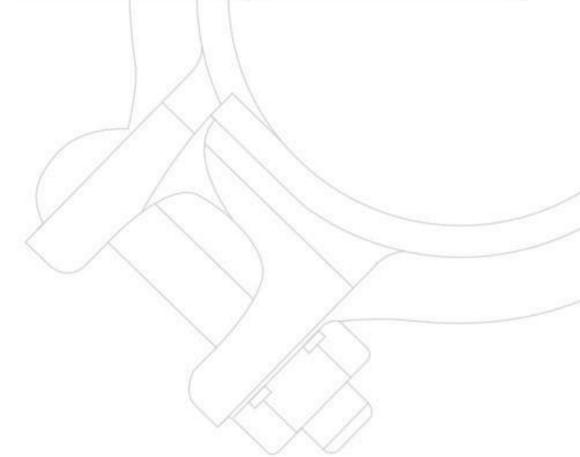

equipped with most advanced casting, milling, painting and assembling facilities, including 3 DISA automatic molding line, semi-automatic casting machine, precision casting line, large size floor molding system and relevant comprehensive testing equipment.

Multiple markets served, Our piping systems are found worldwide in multiple applications- from commercial comfort piping systems; industrial process and utility piping; petrochemical and metallurgy industries; coal and mineral mining operations; water and wastewater plants, and facilities.

## Certificates & approvals

- CNG brand Grooved products are designed, manufactured,
- managed strictly by the ISO quality management system
- C1SO 9001:2000 Quality Management System certificated
- C1SO 14001 Environmental Management System certificated
- COHSAS 18001 Occupational Health and Safety Assessment
- Series certificated
- CcULus(UL/cUL listed and FM approved
- CVdS and LPC approvals are under process.
- CNG Grooved Fitting are Marketed by **SKS**

## PRODUCTION EQUIPMENT

CNG Grooved piping system is reliable and is faster to install than welding, threading, or flanging, resulting in the lowest installed cost. It can be adapted to suit standard pipe with cut grooves or standard and light wall pipe with rolled grooves. Couplings perform equally well under pressure and vacuum. Couplings are available for flexible and rigid systems.

GROOVED  
COUPLING AND FITTINGS 3-4

## Products Type

CNG grooved piping system covers following categories:

- **Grooved Couplings**

Grooved couplings are designed as a ring self-centering connector, the inner key area of the housing engages in the pipe grooves to provide a pipe connection. When the flexible coupling is assembled in the pipeline, a gap is formed between the pipe ends to allow axial displacement and lateral deflection. Rigid coupling locks the pipes directly without deflection.

- **Mechanical Outlets**

The housing of branch outlet fittings has two different parts, respectively, the outlet housing and the cover. The mechanical outlets can be composed of two outlet housing (said the mechanical cross), or one outlet housing plus one cover (said as mechanical tee). The outlet housing is designed as a self-positioning structure, to build a branch outlet on the main pipe run.

- **Grooved Non-Gasket Fittings**

Grooved fittings have a variety of styles, to provide flow direction turning, diameter reducing, branching and other functions.

## Products Component

- **Housing**

Material : Ductile cast iron conforming to ASTM A-536, Grade 65-45-12.

Surface Finish : Standard : Epoxy powder coating

Optional : Galvanized (Zinc Plated, HDG), Dip painted

Surface Color : Variable colors for choice

- **Rubber Gasket**

Standard: EPDM.

Optional : Nitrile, Silicone, Fluoroelastomer, Neoprene

The sealing mechanism of grooved couplings and mechanical outlets is basically the same, the main structure of the gasket has "C" shape, forming a triple seal function. The first seal is formed by the elasticity of the gasket during the static state. After the coupling is installed, the gasket is confined by the housing of groove coupling or the mechanical outlet, the second seal is formed. Medium inside the pipe system press the "C" cavity after pressurizing, it increases the adhesion between gasket lip and steel pipe surface, so as to achieve the third reactive seal. The greater the pressure of the fluid within the pipe, The better the sealing of the coupling.

The material of the gasket must be chosen to follow the characteristics of the fluid medium below. The commonly used gasket are shown in the following table:

Grade	Temperature Range	Rubber Compound	Color Code	General Service Recommendations
E	-30°F to +230°F -34°C to +110°C	EPDM	Green Stripe	Recommended for hot water service within the specified temperature range plus a variety of dilute acids, oil-free air and many chemical services. UL classified in accordance with ANSI/NSF 61 for cold +86°F/+30°C and hot +180°F/+82°C potable water service. <b>NOT RECOMMENDED FOR PETROLEUM SERVICES.</b>
T	-20°F to +180°F -29°C to +82°C	Nitrile	Orange Stripe	Recommended for petroleum products, hydrocarbons, air with oil vapors, vegetable and mineral oils within the specified temperature range; except hot dry air over +140°F/+60°C and water over +150°F/+66°C. <b>NOT RECOMMENDED FOR HOT WATER SERVICES.</b>
O	-20°F to +300°F -29°C to +149°C	Fluoroelastomer	Blue Stripe	Recommended for many oxidizing acids, petroleum oils, halogenated hydrocarbons, lubricants, hydraulic fluids, organic liquids and air with hydrocarbons to +300°F/+149°C.
L	-30°F to +350°F -34°C to +177°C	Silicone	Body white	Recommended for dry heat, air without hydrocarbons to +350°F/+177°C and certain chemical services.
V	-30°F to +180°F -34°C to +82°C	Neoprene	Yellow Stripe	Recommended for hot lubricating oils and certain chemicals. Good oxidation resistance. Will not support combustion.

For specific compound and temperature compatibility, see this book Chemical Application Table

- **Bolt/Nut**

Heat treated and electro galvanized bolts with oval neck, and heavy duty hexagon nuts.

Track head meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.

As the manufacturer and innovator of grooved coupling technology, CNG offers a variety of coupling sizes and styles for almost any piping application.

All grooved couplings are made up of four parts, namely housing, gasket, bolt and nut. Housing is made of ductile iron, surface finish is orange, but also for a variety of fluid piping system to provide matching color scheme; standard gasket material is EPDM, also prepared for a variety of pipeline media rubber material. The bolt's tensile rating is class 8.8 and the nut's rating 8.0.

CNG couplings provide pipe system with versatility not found in other pipe connection methods. CNG rigid and flexible couplings can be combined to allow for thermal growth within the system. Additionally, the use of three consecutive flexible couplings reduces noise and vibration and eliminates costly noise dampeners.

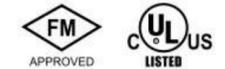

Style 1GS Rigid Coupling  
DN25~DN300 1"~12"  
33.4mm~323.9mm

Style 1X Angle-pad Rigid Coupling  
DN25~DN300 1"~12"  
33.4mm~323.9mm

Style 1N Flexible Coupling  
DN25~DN300 1"~12"  
33.4mm~323.9mm

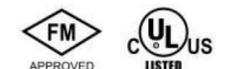

Style 1NH H.D. Flexible Coupling  
DN25~DN300 1"~12"  
33.4mm~323.9mm

Style 1NR Reducing Flexible Coupling  
DN32~DN200 1 1/4"~8"  
42.4mm~219.1mm

Style 321 Split Flange Adaptor  
DN50~DN200 2"~8"  
60.3mm~219.1mm

Design Date

Design Date

## Introduction

This CNG General Catalog has been written for the piping system installer, designer, specification writer and owner as a basic reference guide for data about CNG mechanical piping methods. This catalog is organized to provide information in the context and form most readily usable. For easy identification of major sections of interest, see the condensed table of contents, for a fully detailed index. For more detailed information, consult Design Data.

## Important Information

After more than a decade of experience in grooved-connected pipelines, CNG has developed multi-gauge and multi-pressure ratings of grooved products for use with different pipe materials.

CNG standard grooved piping system products are designed for use only with pipes and fittings that conform to the global groove standard as AWWA C606. Piping must be prepared in accordance with the groove specifications published by CNG and the performance data listed in this catalog is based on the correct preparation of the piping. In particular, installer must choose the right rubber seal material to suit applications. It should be noted that some special applications are not recommended to use the standard sealing material. Please refer to the "Rubber Gasket" section of this catalog for a list of applications where rubber sealant materials are recommended, as well as applications not recommended for use. CNG rubber gasket must be lubricated to facilitate proper installation and use. The seal lubricant must comply with CNG regulations or approval. Fully lubricate the outer surface of the gasket, including the lips and tube ends, and the housing cavity for lubrication, which will help prevent the rubber gasket from crinkling during installation.

## Notice

The technical and performance data, weights, dimensions and specifications published in this catalog supersede all previously published data.

CNG Company maintains a policy of continual product improvement and, therefore, reserves the right to change product specifications, designs, and standard equipment without notice and without incurring obligation.

For the most up-to-date CNG product information, please visit [www.cngruv.cn](http://www.cngruv.cn). All data & information presented in this catalog is intended for piping design reference in utilization of CNG products for their intended application. It is not intended as a substitute for competent, professional assistance which is an obvious requisite to any specific application.

## Design

Reference should always be made to design information available at no charge on request from CNG. Good piping practices should always prevail. Specific pressures, temperatures, external or internal loads, performance standards and tolerances must never be exceeded. Many applications require recognition of special conditions, code requirements and use of safety factors. Qualified engineers must make these decisions.

While every effort has been made to ensure its accuracy, CNG Company, its subsidiaries and affiliated companies, make no express or implied warranty of any kind respecting the information contained in this catalog or the material referred to herein.

Anyone making use of the information or material contained herein does so at their own risk and assumes any and all liability resulting from such use.

## Designations of global pipe sizes

CNG product data is utilized worldwide and all technical data is shown in both imperial (U.S.) and metric terms. The following chart shows a comparison between typical metric and IPS pipe sizes.

Size		Design Date	ISO	ANSI	BS	DIN	JIS	GB

## Products Presentation

Three traditional methods to connect steel pipes, namely welding, flange connection and screw connection.

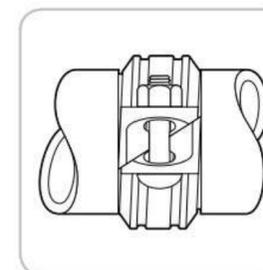

CNG grooved piping system use the grooved couplings & branch outlet fittings as the key, supplemented by a variety of non-gasket pipefittings. This is a pipe connection revolution. In present, CNG manufactures all kinds of grooved branch outlet fittings and non-gasket fittings. In order to meet the needs of customers, CNG also developed extended products such as grooved end valves, filters, etc. CNG will continue to improve and optimize so that the company's product line can fulfill demands in civil construction, municipal and industrial fields..

CNG groove piping system is an universal, economic, safe and practical piping system components, the installation process will not bring any pollution to the pipeline. It is an environmentally friendly green product.

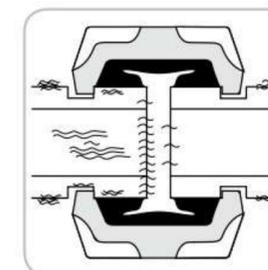

CNG groove piping system builds pipe connection on the external surface of steel pipes. The inner diameter & interior surface of the pipe has no matter of the connection, which makes the range of application of this product much more extended.

## Products Strong Point

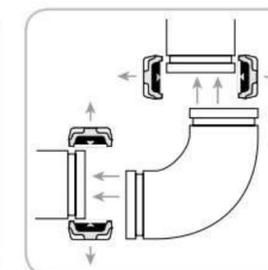

Compared with the traditional piping methods such as welded, flanges or threaded connection, the grooved and mechanical outlet fittings has very significant advantages, mainly in the following aspects:

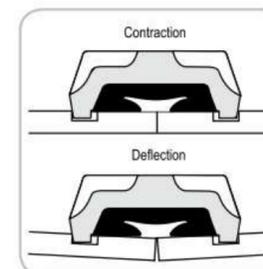

◆ Rigid  
Rigid coupling provides enough rigidity to resist tube twisting and bending moment.

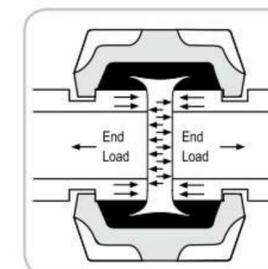

◆ Noise and vibration  
The separation between pipe ends reduces the transmission of noise and vibration, provides the entire system a significant dampening effect

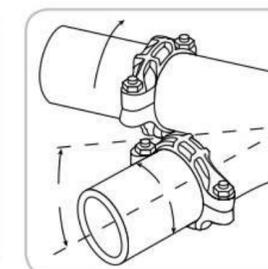

◆ system maintenance  
System unit can be disassembled without moving the pipeline, thus facilitating system maintenance and modification.

◆ Flexibility  
Flexible coupling provides radial and axial deflection. It absorbs expansion, contraction, deflection and vibration.

◆ Earthquake stress  
The full circumferential engage between couplings keys and pipe grooves provides sufficient internal pressure and pipe end load capacity to withstand pipe movement.

◆ Easy alignment  
Groove system allows free rotation of pipe and system components prior final fixing.

**Warning**

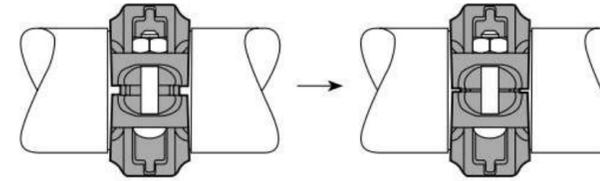

Before attempting to install, disassemble, and adjust any CNG product, please depressurize and drain the plumbing system. Failure to do this may result in personal injury, property damage, leaks, and / or other potential function failure.

## Rubber Gasket Types

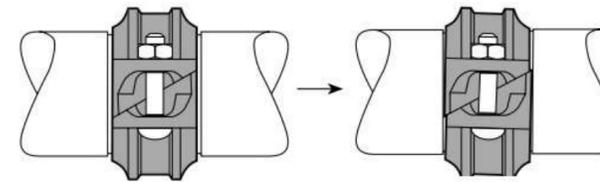

Rubber Gasket Types		Style 1GS	Style 1X	Style 1N	Style 1NR	Style 321
CG1		*	*	*		
RCG1					*	
CG4		*	*	*		
FG1						*

## Rigid coupling connection & performance

The structure of the socket type rigid coupling is compact, with the inner and outer female and male teeth, socket type, meshing design, the use of the gap between the female and male port socket combination of pipe and joint meshing to achieve the rigid requirements.

Due to the improved interface structure, it is not easy to make the gasket to produce transverse and oblique twists and turns, the positioning of the gasket is more accurate, the abnormal pressing and destructive pressure loss of the gaskets are avoided, the sealing property is increased, and the overall joint is increased service life.

The Angle-pad rigid coupling is designed to sliding rather than vertical moving when tightening the housing. So the pipe tightly stuck to form a rigid connection. This 60° diagonal sliding also forces the coupling housing keys to make double sided contact on the inside and outside edges of the groove so that axial and radial movement of the tube cannot occur and the effect of rigid connecting pipe is truly achieved. No deflection after installation.

This rigid coupling allows for more accurate positioning of the tube end forming a fixed tube end separation that should be considered in the design and installation (see the following list of parameters).

12	12.750	0.193	0.193

- Rigid couplings cannot be used to absorb any piping system movement.
- For the absorption of pipe system movement, please use flexible couplings.

## Flexible Coupling Systems & Performance

Using of flat joint design, flexible coupling keeps a separation between pipe ends to achieve flexibility of pipeline. This structure ensures the strength without fully holding the pipes, allows axial and radial displacement, suitable for deflection requirements of the pipeline. The flexible coupling is designed to absorb the deviation of the pipe outer diameter without affecting the joint performance

- All the parameters in the above table are the maximum tolerance of each flexible coupling.
- These values are based on standard roll grooved pipe. Figures for standard cut grooved pipe may increase.
- All the parameters in the above table are the maximum performance parameters. When designing and installing, the corresponding safety factor should be considered. It is suggested that the pipe diameter of DN25 ~ DN80 should be reduced to 50% and the pipe diameter of DN100 ~ DN300 should be reduced to 75%.

## Style 1GS Rigid Coupling

- Model 1GS rigid coupling, socketed & meshing design
- Female and male port socket design is not easy to make the horizontal and horizontal seal twists and turns, the gasket is not exposed, increasing the sealing and improve the overall service life of the joint
- Enhanced body resists 4 times working pressure.

- **Housing material** : Ductile iron conforming to ASTM A-536, grade 65-45-12.
- **FM Approved & UL Listed** : R.W.P. rated working pressure 300PSI(2.065MPa / 20.65bars)
- **Housing Finish** : Fusion Bonded Epoxy Coated ( Optional : Hot Deep Galvanized and Others )
- **Coupling gasket material** : EPDM ( Optional : Nitrile NBR , Silicone and Others )
- **Bolts and Nuts** : Heat treated and electro galvanized bolts with oval neck, and heavy duty hexagon nuts. Track head meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.
- **Size Range** : DN25 through DN300 (1" through 12")

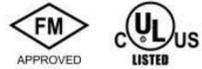

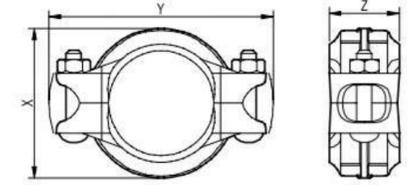

## Grooved Couplings

## Grooved Couplings

### Style 1X Rigid Coupling – Angle pad

### Style 1N Flexible Coupling

- Model 1X Angle pad rigid coupling
- This rigid coupling allows for more accurate positioning of the tube end, forming a fixed tube end separation, which should be considered in the design and installation.
- Enhanced body resists 4 times working pressure.

## Grooved Couplings

### Style 1NH Heavy Duty Flexible Coupling

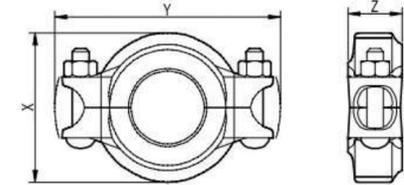

- Style 1NH heavy duty flexible coupling provides flexible connection by the gap between pipe groove and coupling key.
- Unique design allows both axial and radial movement, suitable for pipeline with flexibility under intermediate pressure.
- Enhanced body resists 4 times working pressure.

- Housing material : Ductile iron conforming to ASTM A-536, grade 65-45-12.
- FM Approved & UL Listed : R.W.P. rated working pressure 300PSI(2.065MPa / 20.65bars)
- Housing Finish : Fusion Bonded Epoxy Coated ( Optional : Hot Deep Galvanized and Others )
- Coupling gasket material : EPDM ( Optional : Nitrile NBR , Silicone and Others )
- Bolts and Nuts : Heat treated and electro galvanized bolts with oval neck, and heavy duty hexagon nuts. Track head meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.
- Size Range : DN25 through DN300 (1" through 12")

## Grooved Couplings

### Style 1NR Reducing Flexible Coupling

- Model 1NR is a reducing flexible coupling. Two ends can connect to different diameter of steel pipe. The middle of the coupling with a steel plate to avoid telescope by vertical installation.
- The structure ensures lower cost and faster installation under the premise of ensuring the strength.
- Enhanced body resists 4 times working pressure.

- Housing material : Ductile iron conforming to ASTM A-536, grade 65-45-12.
- FM Approved & UL Listed : R.W.P. rated working pressure 300PSI(2.065MPa / 20.65bars)
- Housing Finish : Fusion Bonded Epoxy Coated ( Optional : Hot Deep Galvanized and Others )
- Coupling gasket material : EPDM ( Optional : Nitrile NBR , Silicone and Others )
- Bolts and Nuts : Heat treated and electro galvanized bolts with oval neck, and heavy duty hexagon nuts. Track head meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.
- Size Range : DN40 X DN32 through DN200 X DN150 (1 1/2" X 1 1/4" through 8"X6")

## Grooved Couplings

### Style 321 Split Flange

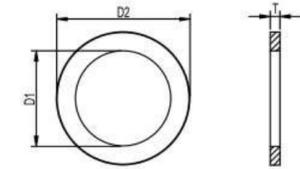

- Style 321 split flange mainly use for the flange connection with the valve, equipment or pipe conversion connection to solve the groove connection and flange connection conversion, installation is simple and fast.
- Model 321 split flange's bolt holes designed into oval hole. ANSI Class 125 & 150 and PN16 grade flanges are universally available, with DN50 to DN80 (2" to 3" ) for both PN10 and PN25 nominal flanges; DN100 to DN150 (4" to 6" ) for both flanges PN10 nominal grade flange.
- In addition to the standard flanges described above, it is also available to provide flanges under other standards such as JIS 10K and ANSI Class 300.

8	8.625	8.622	10.748	0.236	2.15

- Model 321 split flange assembled on a flange with a soft sealing surface, a steel plate will be added in the middle.
- Model 321 split flanges are connected with the flange without soft sealing surface, the middle of the flange should be attached metal flange gasket and rubber flange.

## General

Grooved pipe fittings mainly include groove elbows, tee, cross, head, end cap and flange adaptor, etc., is an indispensable accessory in the grooved piping system, widely used in the whole system. Due to the grooved pipe fittings, making the site on-site installation and piping becomes quick and easy, is a very ideal way of piping.

The commonly used grooved fittings are made by the casting process. Most of the groove parts are made by casting. The advanced equipment and exquisite casting technology ensure the dimension accuracy of the groove. Machined grooves used, high precision machining, to ensure the reliability of the pipe system connection.

The material of the grooved pipe fitting is ductile iron, which has the same performance as the connector shell. It has very high strength and toughness, and is a high-quality and long-life product.

The power of the pipeline system is provided by the pump. After passing through the entire piping system, it is ensured that sufficient pressure will be obtained on reaching the water equipment or appliances, and the pressure loss of the piping system will be minimized and the energy saving effect of the system will also be achieved.

The pressure loss of the pipe system is mainly caused by the pressure loss of pipes, pipe fittings, valves and some other fittings or accessories. The most serious pressure loss is the fittings of the pipe fittings. Therefore, it is very necessary to effectively control and improve the pressure loss of pipe fittings.

CNG groove fittings have carried out the calculation of the flow coefficient, to ensure product safety and life expectancy, but also to ensure adequate flow path diameter, turning radius and the smoothness of the inner surface, so as to ensure The pressure loss of the entire pipeline system is reduced, and the energy saving effect is achieved.

The pressure loss of CNG grooved pipe fittings can be estimated by referring to the flow coefficient table on the next page..

CNG groove fittings in addition to the standard ductile iron parts, there are other types of pipe fittings.

- lined plastic grooved pipe fittings
- The lining plastic is lined with a layer of PTFE material on the inner surface of the pipe fitting, which is tasteless and non-toxic, and is an environmentally friendly food-grade material. Plastic pipe fittings are mainly used in domestic water piping systems or food-grade requirements of the pipeline system, such as pharmaceutical, food and other industries process pipeline.
- hot galvanized groove pipe fittings
- Steel grooved pipe fittings

## Flow Date

The chart expresses the frictional resistance of various CNG fittings as equivalent feet of straight pipe. Fittings not listed can be estimated from the data given, for example, a 22.5° elbow is approximately one-half the resistance of a 45° elbow. Values of mid-sizes can be interpolated.

Note: The flow data listed is based upon the pressure drop of Schedule 40 pipe.

## Material Specifications

### Housing :

A : Ductile cast iron, QT450-12.conforming to ASTM A—536 , Grade 65—45—12.

Ductile cast iron material is not easy to rust, high strength & toughness, good extensibility, but also has strong shock absorption properties.

B : Steel, steel groove pipe fittings made of high-quality cold-rolled steel pipe, the groove is made of rolled (also according to customer requirements for cutting groove ) ,

### Housing color:

Standard color: orange red paint

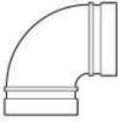

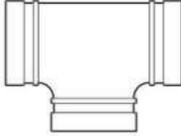

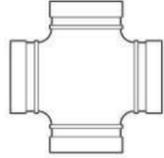

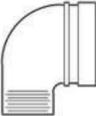

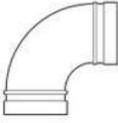

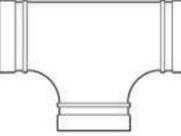

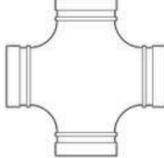

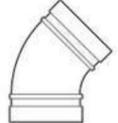

Electrostatic powder epoxy resin powder, salt spray time more than 600 hours, superior corrosion resistance.

**Other Optional:** blue paint, gray paint, galvanized, etc. (order must be specified)

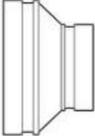

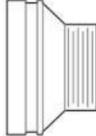

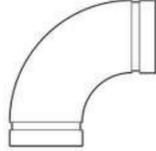

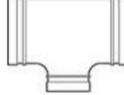

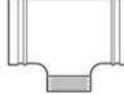

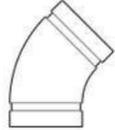

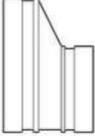

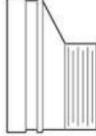

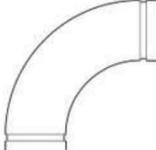

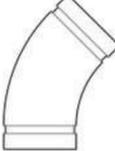

## Grooved Fittings

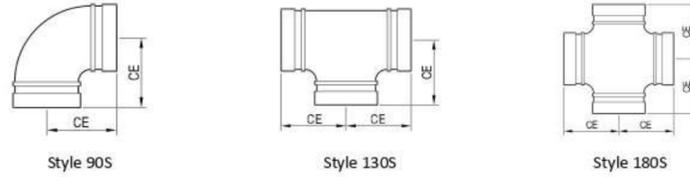

- The rated pressure of all standard pipe fittings is equal to the rated pressure of the coupling is used
- All pipe fittings are cut groove ends, as well as thread, flange and other conversion ends.
- Housing Finish: Fusion Bonded Epoxy Coated(Optional:Hot Deep Galvanized and Others)

Grooved Fittings

## Style 321G Flange Adaptor Nipple

- Model 321G flanged adaptor is mainly used for the conversion connection of valves, equipment or pipes which interface with some flanges, which solves the conversion of the grooved connection and the flanged connection, and the installation is quick and easy.

- Model 321G flanged adaptor has bolt hole designed into an oval shape. ANSI Class 125 & 150 and PN16 grade flanges are universally available, with DN50 to DN80(2"to 3") for both PN10 and PN25 nominal flanges; DN100 to DN150 (4"to 6") for both flanges PN10 nominal grade flange.

- In addition to the above standard flanged short pipe products, other flange standards such as JIS 10K and ANSI Class 300 can also be supplied.

- Housing material: Ductile iron conforming to ASTM A-536, grade 65-45-12.
- FM Approved & UL Listed: R.W.P. rated working pressure 300PSI (2.065MPa / 20.65kgf/cm<sup>2</sup>)
- Housing Finish: Fusion Bonded Epoxy Coated (Optional: Hot Deep Galvanized and Others)
- Size Range: DN32 X DN25 through DN300 X DN250 (1 1/4" X 1" through 12" X 10")

- Housing material: Ductile iron conforming to ASTM A-536, grade 65-45-12.
- FM Approved & UL Listed: R.W.P. rated working pressure 300PSI (2.065MPa / 20.65kgf/cm<sup>2</sup>)
- Housing Finish: Fusion Bonded Epoxy Coated (Optional: Hot Deep Galvanized and Others)
- Size Range: DN32 X DN25 through DN300 X DN250 (1 1/4" X 1" through 12" X 10")

## Grooved Fittings

### Specific Elbow

Style 9015D  
Long Radius 90° Elbows 1.5 D

Style 4515D  
Long Radius 45° Elbows 1.5 D

Style 9030D  
Long Radius 90° Elbows 3D

Style 4530D  
Long Radius 45° Elbows 3D

- All the products in this table are non-cast products made of steel pipe.
- In addition to the long radius of curvature listed in this table, other bend radius elbows are available upon request.

- Housing material: Steel
- Housing Finish: Fusion Bonded Epoxy Coated (Optional: Hot Deep Galvanized and Others)
- Size Range: DN50 through DN300 (2" through 12")

## Mechanical Outlets

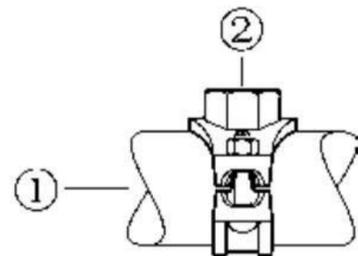

- ◆ Branch outlet fitting is a supplement to the grooved piping system. It is a very important piping unit in the mechanical piping system. The appearance of the branch outlet fitting makes the installation of the piping system more convenient and quick. Branch outlet fittings replaced welding and reducing Tee, to solve the problem of the connection branch.
- ◆ Branch outlet fitting is another way of piping innovation, is the use of bolted connections branch pipe fittings. No need to weld directly from the supervisor on the branch pipe. The method used is in the need to take over the main branch pipe processing a round hole, fitted with branch outlet housing. The opening must be secured on the centerline of the pipe and be mechanically perforated by a dedicated opening.
- ◆ CNG branch outlet fitting, including mechanical tee, mechanical cross, U-bolt.

## Flow Date

The flow coefficient and flow resistance of the product at 16°C (60 F) are shown in the table on the right.

Since the pressure of the medium varies across the manifolds, the connection of the product functions best when the medium flows between ① and ②. As shown below.

The physical relationship between the various parameters under different pressures can be calculated from the formula on the right and from the data on the right.

## Formulas for CV Values:

$$\Delta P = \frac{Q^2}{C_v^2}$$

$$Q = C_v \times \sqrt{\Delta P}$$

注:

$\Delta P$  : Pressure Drop , MPa

$Q$  : Flow , L/min

$C_v$  : Flow Coefficient

Size		C <sub>v</sub> Values	Equiv. of Pipe		Size		CV Values	Equiv. of Pipe

## Mechanical Outlets

## Mechanical Cross

Mechanical cross description:

- ◆ Model 3GG grooved mechanical cross is built by 2 pieces of model 3G's outlet housing.
- ◆ Model 3JJ threaded mechanical cross is built by 2 pieces of model 3J's outlet housing

In the sprinkler system, the use of mechanical cross should be in accordance with the following principles, otherwise it will affect the strength of the pipeline:

All sizes of 3G / 3J mechanical tee can be combined into a mechanical cross, but must be combined according to certain principles, otherwise it will affect the strength of the pipeline, see the table on the right.

## Mechanical Outlets

- ◆ With mechanical outlet fittings, the branch pipe can be built directly from the main pipe without welding.
- ◆ Gasket designed with the pipe arc to pipe surface, so as to achieve a more ideal sealing effect.
- ◆ Hole cut must be ensured on the center line of the pipe and be perforated by hole saw.

## Mechanical Outlets

### Mechanical Tee

Style 3G

Style 3J

#### Style 3G Grooved Outlet Mechanical Tee

#### Style 3J Threaded Outlet Mechanical Tee

- By using the bolting method, the branch pipe is directly connected with the main pipe without welding.
- All products have 21.3mm (1/2") outlets and 26.9mm (3/4") outlets. All sizes is the same with 33.4mm (1") outlets.
- Enhanced body resists 4 times working pressure.

- **Housing material:** Ductile iron conforming to ASTM A-536, grade 65-45-12.
- **FM Approved & UL Listed:** R.W.P. rated working pressure 300PSI(2.065MPa / 20.65bars)
- **Housing Finish:** Fusion Bonded Epoxy Coated(Optional:Hot Deep Galvanized and Others)
- **Coupling gasket material:** EPDM(Optional:Nitrile NBR,Silicone and Others)
- **Bolts and Nuts:** Heat treated and electro galvanized bolts with oval neck, and heavy duty hexagon nuts. Track head meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.
- **Size Range:** DN50 X DN25 through DN200 X DN100 (2" X 1" through 8" X 4")

## Mechanical Outlets

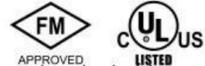

### Mechanical Tee

Style 3G Grooved Outlet Mechanical Tee

Style 3J Threaded Outlet Mechanical Tee

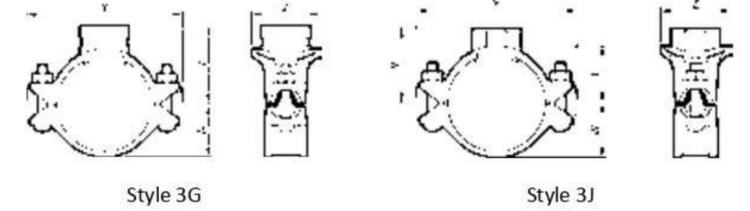

- By using the bolting method, the branch pipe is directly connected with the main pipe without welding
- All products have 21.3mm (1/2") outlets and 26.9mm (3/4") outlets are the same as 33.4mm (1") outlets.
- Enhanced body resists 4 times working pressure.

### Mechanical Cross

Mechanical Tee, all the sizes can be combined into a mechanical cross. But it should be in accordance with certain principles of combination, otherwise it will affect pipe strength. This table shows the principle of combination.

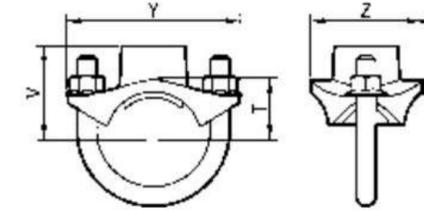

★ Can be combined into mechanical cross.  
 ✘ Not recommended to assemble a mechanical cross.

Size		Branch Pipe

### Mechanical Tee

#### Style 3L U-bolt Mechanical Tee

- U-bolt replaces cover part, without welding, directly from the main pipe branch
- Enhanced body resists 4 times working pressure.

Size			Max Work Pressure	Hole Size	Dimensions				Bolt/Nut Size	Approx. Wgt.

		1	350	1.20	4.25	2.25	2.72	2.00	3/8 X 3 1/2 X 2 1/4	0.90

- **Housing material:** Ductile iron conforming to ASTM A-536, grade 65-45-12.
- **FM Approved & UL Listed:** R.W.P. rated working pressure 300PSI(2.065MPa / 20.65bars)
- **Housing Finish:** Fusion Bonded Epoxy Coated(Optional:Hot Deep Galvanized and Others)
- **Coupling gasket material:** EPDM(Optional:Nitrile NBR,Silicone and Others)
- **Bolts and Nuts:** Heat treated and electro galvanized bolts with oval neck, and heavy duty hexagon nuts. Track head meeting the physical and chemical requirements of ASTM A-449 and physical requirements of ASTM A-183.
- **Size Range:** DN32 X DN15 through DN65 X DN25 (1 1/4" X 1 1/2" through 2 1/2" X 1")

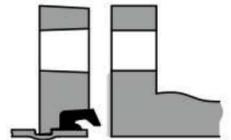

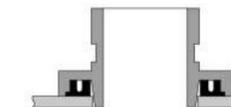

## Rubber Gasket

CNG gaskets are designed to provide life-of-the-system service in a wide variety of applications. Gasket materials are available to meet most piping applications. For a list of service recommendations by gasket type see pg 45-47

## Rubber Gasket Styles

 <p><b>Standard C type:</b> Usually with grooved fittings. 1GS, 1X, 1N, 1NH, such as no special requirements are supporting this type of rubber seals</p>	 <p><b>E type :</b> Usually with grooved fittings. 1GS, 1X, 1N, 1NH can be matched with this type of rubber seal</p>	 <p><b>Reducing type :</b> Usually with grooved reducing fitting. 1NR supporting this type of rubber ring.</p>
 <p><b>Flange type:</b> 321-type slip flange are matched with this type of rubber ring</p>	 <p><b>Opening reaction type:</b> 3G, 3J are optional matching this type of rubber ring</p>	 <p><b>Hole labyrinth type:</b> 3G, 3J are optional matching this type of rubber ring</p>

## Rubber Gasket Materials

As elastomer technology advanced, superior gasket materials became available and were added to the CNG line. This allows CNG to presently offer a variety of synthetic rubber gaskets to provide the option of selecting CNG products for the widest variety of applications. For most water system piping applications, CNG grade EPDM rubber is recommended. CNG E-grade rubber gasket material with excellent performance in anti-aging and heat resistance, the material at 125 °C (257°F) temperature, the material for hot air aging test, the physical properties of the basic unchanged. When the rubber in a non-air environment, such as water piping system, its anti-aging properties will be further strengthened. Since water has no deteriorating effect on the elastomer, temperature is the only limiting factor to be considered in determining the life expectancy of the elastomer in water service. The superior performance of the Grade "E" elastomer permits its use for hot water service up to +230°F/+110°C . The Grade "E" gasket is superior to previous gasket materials by all performance barometers, including high and low temperature limits, tensile strength, chemical resistance and shelf life.

## Rubber Gasket Date

To assure the maximum life for the service intended, proper gasket selection and specification in ordering is essential. Many factors must be considered in determining the optimum gasket for a specific service. The foremost consideration is temperature , along with concentration of product, duration of service and continuity of service. Temperatures beyond the recommended limits have a degrading effect on the polymer. Therefore, there is a direct relationship between temperature, continuity of service and gasket life. Services listed are General Service Recommendations only. It should be noted that there are services for which these gaskets are not recommended. For a list of application-specific and non-recommended application recommendations, reference should be made to the latest selection guide for seals. The use of gasket only for the selection of rubber materials in the product, does not involve the selection of metal shell, fittings and bolts and nuts. For the housing, accessories and bolts and nuts selection, should be selected according to the actual application environment.

## Rubber Gasket Lubricant

When installing the product, the outer surface of the gasket should be lubricated, this will help prevent the gasket from being crushed during installation. It is recommended to lubricate the outer surface of the gasket, including the lip and / or tube end, and the housing cavity, and the lubricated aprons surface will help to properly install the product. Under normal circumstances recommended the use of special lubricants, if necessary, consult the relevant CNG institutions. Also available household human body can be directly exposed to the washing products, add water after modulation, such as detergents, soap, detergent, etc., avoid using mechanical lubricants, such as butter and so on.

 **Warning**

To ensure that the rubber seal in the application of the longest life expectancy, the correct choice when ordering rubber seal material and specifications are the most basic requirements. Failure to select the right rubber seal material can result in personal injury or property damage, joint leakage, or connection failure.

## Rubber Gasket Materials

The material of the gasket must be determined according to the characteristics of the fluid medium. The commonly used sealing rings are shown in the following table :

Grade	Temperature Range	Rubber Compound	Color Code	General Service Recommendations
E	-30°F to +230°F -34°C to +110°C	EPDM	Green Stripe	Recommended for hot water service within the specified temperature range plus a variety of dilute acids, oil-free air and many chemical services. UL classified in accordance with ANSI/NSF 61 for cold +86°F/+30°C and hot +180°F/+82°C potable water service. NOT RECOMMENDED FOR PETROLEUM SERVICES.
T	-20°F to +180°F -29°C to +82°C	Nitrile	Orange Stripe	Recommended for petroleum products, hydrocarbons, air with oil vapors, vegetable and mineral oils within the specified temperature range; except hot dry air over +140°F/+60°C and water over +150°F/+66°C. NOT RECOMMENDED FOR HOT WATER SERVICES.
O	-20°F to +300°F -29°C to +149°C	Fluoroelastomer	Blue Stripe	Recommended for many oxidizing acids, petroleum oils, halogenated hydrocarbons, lubricants, hydraulic fluids, organic liquids and air with hydrocarbons to +300°F/+149°C.
L	-30°F to +350°F -34°C to +177°C	Silicone	white	Recommended for dry heat, air without hydrocarbons to +350°F/+177°C and certain chemical services.
V	-30°F to +180°F -34°C to +82°C	Neoprene	Yellow Stripe	Recommended for hot lubricating oils and certain chemicals. Good oxidation resistance. Will not support combustion.

For specific compound and temperature compatibility, see this book Chemical Application Table
